# 1.3. 问题详情

| <mark>规则</mark> Variable | s should be declared with "let" or "const"   |
|--------------------------|--|
| 规则描述                     | ECMAScript 2015 introduced the let and const keywords for block-scope variable declaration. Using const creates a read-only (constant) variable.  The distinction between the variable types created by var and by let is significant, and a switch to let will help alleviate many of the variable scope issues which have caused confusion in the past.  Because these new keywords create more precise variable types, they are preferred in environments that support ECMAScript 2015. However, some refactoring may be required by the switch from var to let, and you should be aware that they raise SyntaxError s in pre-ECMAScript 2015 environments.  This rule raises an issue when var is used instead of const or let.  Noncompliant Code Example  var color = "blue"; var size = 4;  Compliant Solution  const color = "blue"; let size = 4; |

规则 Variables should be used in the blocks where they are declared

```
规则描述
                   Variables that are declared inside a block but used outside of it
                  (which is possible with a var -style declaration) should be declared outside the block.
                   Noncompliant Code Example
                  function doSomething(a, b) {
                   if (a > b) {
                     var x = \hat{a} - b; // Noncompliant
                   if (a > 4) {
                     console.log(x);
                  for (var i = 0; i < m; i++) { // Noncompliant, both loops use same variable
                   for (var i = 0; i < n; i++) {
                   return a + b;
                   Compliant Solution
                  function doSomething(a, b) {
                   var x;
                   if (a > b) {
                     x = a - b;
                   if (a > 4) {
                     console.log(x);
                    for (let i = 0; i < m; i++) {
                   for (let i = 0; i < n; i++) {
                    return a + b;
```

| 文件名称            | 违规行                |
|-----------------|--------------------|
| myJSver10.js    | 126, 127, 128, 172 |
| leafletDraw.vue | 172, 173, 174, 189 |

规则 "switch" statements should have "default" clauses

```
规则描述
                  The requirement for a final default clause is defensive
                  programming. The clause should either take appropriate action, or
                  contain a
                  suitable comment as to why no action is taken.
Noncompliant Code Example
                  switch (param) { //missing default clause
  case 0:
                    doSomething();
                    break;
                   case 1:
  doSomethingElse();
                    break;
                  switch (param) {
                   default: // default clause should be the last one
                    error();
                    break;
                   case 0:
                    doSomething();
                    break;
                   case 1:
                    doSomethingElse();
                    break;
                  Compliant Solution
                  switch (param) { case 0:
                    doSomething();
                    break;
                   case 1:
                    doSomethingElse();
                    break;
                   defaulť:
                    error();
                    break;
                  See
                     MITRE, CWE-478 - Missing Default Case in Switch Statement

规则 "for of" should be used with Iterables

| 规则描述            | If you have an iterable, such as an array, set, or list, your best option for looping through its values is the for of syntax. Use a counter, and well you'll get the right behavior, but your code just isn't as clean or clear.  Noncompliant Code Example |   |
|-----------------|--|---|
|                 | const arr = [4, 3, 2, 1];  |   |
|                 | for (let i = 0; i < arr.length; i++) { // Noncompliant console.log(arr[i]); }  |   |
|                 | Compliant Solution   |   |
|                 | const arr = [4, 3, 2, 1];  |   |
|                 | for (let value of arr) {    console.log(value); }  |   |
| 文件名称            |  |   |
| myJSver10.js    | 124, 17  | 2 |
| leafletDraw.vue | 170, 18  | 9 |

| <b>‡</b> [ |     | "switch" statements should not be nested |
|------------|-----|--|
| N'         | 竹火竹 | SWILLI STATELLIS SHOULD HOLDE HESTER     |

```
规则描述
                             Nested switch structures are difficult to understand because you
                            can easily confuse the cases of an inner switch as belonging to an outer statement. Therefore nested switch statements should be avoided.

Specifically, you should structure your code to avoid the need for nested switch statements, but if you cannot, then consider
                             movina
                            the inner switch to another function.
Noncompliant Code Example
                            function foo(n, m) {
  switch (n) {
                                case 0:
                                   switch (m) { // Noncompliant; nested switch
                                case 1:
                                // ...
default:
                                  // ...
                             Compliant Solution
                            function foo(n, m) {
  switch (n) {
                                case 0:
                                   bar(m);
                                case 1:
                                // ...
default:
                                  // ...
                             function bar(m) {
                              switch(m) {
                                // ...
```

<mark>规则</mark> Literals should not be thrown

| 规则描述            | It is a bad practice to throw something t some level from Error . If you can't find an Error type that suitably conveys what you you should extend Error to create one. Specifically, part of the point of throwing communicate about the conditions of the far less ability to communicate meaningfully than don't include stacktraces. Noncompliant Code Example throw 404; // Noncompl throw "Invalid negative index."; // Nor Compliant Solution throw new Error("Status: " + 404); throw new Error("Invalid negative index."); | n existing a need to convey, then Error s is to error, but literals have Error s because they iant acompliant |

|---|-----|----|
| Jump statements should not occur in "finally" blocks                                    | Bug | 严重 |
| "in" should not be used with primitive types  | Bug | 严重 |
| Function calls should not pass extra arguments  | Bug | 严重 |
| "typeof" expressions should only be compared to valid values                            | Bug | 严重 |
| "Symbol" should not be used as a constructor  | Bug | 严重 |
| A compare function should be provided when using "Array.prototype.sort()"               | Bug | 严重 |
| Results of "in" and "instanceof" should be negated rather than operands                 | Bug | 严重 |
| "super()" should be invoked appropriately   | Bug | 严重 |
| Getters and setters should access the expected fields                                   | Bug | 严重 |
| Destructuring patterns should not be empty  | Bug | 主要 |
| Alternatives in regular expressions should be grouped when used with anchors            | Bug | 主要 |
| Assertions should not be given twice the same argument                                  | Bug | 主要 |
| Unicode Grapheme Clusters should be avoided inside regex character classes              | Bug | 主要 |
| "NaN" should not be used in comparisons   | Bug | 主要 |
| Return values from functions without side effects should not be ignored                 | Bug | 主要 |
| Generators should "yield" something   | Bug | 主要 |
| Related "if/else if" statements should not have the same condition                      | Bug | 主要 |
| All branches in a conditional structure should not have exactly the same implementation | Bug | 主要 |
| The output of functions that don't return anything should not be used                   | Bug | 主要 |
| Values should not be uselessly incremented  | Bug | 主要 |
| Special identifiers should not be bound or assigned                                     | Bug | 主要 |
| Properties of variables with "null" or "undefined" values should not be accessed        | Bug | 主要 |
| Objects should not be created to be dropped immediately without being used              | Bug | 主要 |
| A "for" loop update clause should move the counter in the right direction               | Bug | 主要 |
| Exclusive tests should not be committed to version control                              | Bug | 主要 |
| Function argument names should be unique  | Bug | 主要 |
| Variables should not be self-assigned   | Bug | 主要 |
| Property names should not be duplicated within a class or object literal                | Bug | 主要 |
| Non-empty statements should change control flow or have at least one side-effect        | Bug | 主要 |
|   |     |    |

| React components should not render non-<br>boolean condition values                     | Bug | 主要 |
|---|-----|----|
| Comments inside JSX expressions should be enclosed in curly braces                      | Bug | 主要 |
| React "render" function should return a value   | Bug | 主要 |
| Non-existent operators '=+', '=-' and '=!' should not be used                           | Bug | 主要 |
| "new" operators should be used with functions   | Bug | 主要 |
| Loops with at most one iteration should be refactored                                   | Bug | 主要 |
| Mocha timeout should be disabled by setting it to "0".                                  | Bug | 主要 |
| Identical expressions should not be used on both sides of a binary operator             | Bug | 主要 |
| All code should be reachable  | Bug | 主要 |
| Bitwise operators should not be used in boolean contexts                                | Bug | 主要 |
| Strict equality operators should not be used with dissimilar types                      | Bug | 主要 |
| Setters should not return values  | Bug | 主要 |
| Regular expressions with the global flag should be used with caution                    | Bug | 主要 |
| Promise rejections should not be caught by 'try' block                                  | Bug | 主要 |
| Replacement strings should reference existing regular expression groups                 | Bug | 主要 |
| Alternation in regular expressions should not contain empty alternatives                | Bug | 主要 |
| React state setter function should not be called with its matching state variable       | Bug | 主要 |
| Regular expressions should not contain control characters                               | Bug | 主要 |
| Comma and logical OR operators should not be used in switch cases                       | Bug | 主要 |
| React Hooks should be properly called   | Bug | 主要 |
| React's useState hook should only be used in the render function or body of a component | Bug | 主要 |
| Collection elements should not be replaced unconditionally                              | Bug | 主要 |
| Attempts should not be made to update "const" variables                                 | Bug | 主要 |
| Errors should not be created without being thrown                                       | Bug | 主要 |

| Regular expressions should not contain empty groups                                     | 坏味道 | 主要 |
| Boolean checks should not be inverted   | 坏味道 | 次要 |
| A "while" loop should be used instead of a "for" loop                                   | 坏味道 | 次要 |
| Function call arguments should not start on new lines                                   | 坏味道 | 次要 |
| Extra semicolons should be removed  | 坏味道 | 次要 |
| Return of boolean expressions should not be wrapped into an "if-then-else" statement    | 坏味道 | 次要 |
| Boolean literals should not be used in comparisons                                      | 坏味道 | 次要 |
| Unnecessary imports should be removed   | 坏味道 | 次要 |
| Unused local variables and functions should be removed                                  | 坏味道 | 次要 |
| "await" should not be used redundantly  | 坏味道 | 次要 |
| Wrapper objects should not be used for primitive types                                  | 坏味道 | 次要 |
| "for of" should be used with Iterables  | 坏味道 | 次要 |

| "switch" statements should have at least 3 "case" clauses                     | 坏味道 | 次要 |
|---|-----|----|
| The global "this" object should not be used                                   | 坏味道 | 次要 |
| Deprecated APIs should not be used  | 坏味道 | 次要 |
| Multiline string literals should not be used                                  | 坏味道 | 次要 |
| Class names should comply with a naming convention                            | 坏味道 | 次要 |
| "catch" clauses should do more than rethrow                                   | 坏味道 | 次要 |
| Regular expression quantifiers and character classes should be used concisely | 坏味道 | 次要 |
| Regular expression literals should be used when possible                      | 坏味道 | 次要 |
| Imports from the same modules should be merged                                | 坏味道 | 次要 |
| Jump statements should not be redundant                                       | 坏味道 | 次要 |
| Track uses of "TODO" tags   | 坏味道 | 提示 |
